

New—Hard Drive Destruction Options from CFC

Garner-Products Degausser for hard drives or media stored in magnetic format. This is portable so that hard drives can be destroyed prior to leaving your premises.

This may be very important for government agencies since the state requires that hard drives be wiped or destroyed prior to leaving the agency.

The Degausser generates a burst of magnetic energy that penetrates the hard drive and deletes any stored data. The drives are no longer usable and are recycled.

This PD-5 Data Destroyer folds two hard drives at a time completely destroying the drives.

The SSD-1 attachment destroys all Solid State drives, flash drives, or other non-magnetic media .

All of these units are portable so we can destroy data on your site to further meet your security policies.

CFC uses White Canyon Wipe Drive erasure software so that hard drives can be Reused if they pass the White Canyon wipe. We only keep the best hard drives for Reuse in schools IF they pass the complete White Canyon Wipe and have no hidden sectors, remapped or bad sectors.

We can handle all of your data security needs.
